## Auto Production: Then and Now

List three ways the production process today is the same as it was for the Model T?

- *Large buildings are needed to house the production process*
- *A moving assembly line is used with specialization and division of labor*
- *There is subassembly of some components*
- *The process is repetitive in nature and can be dangerous*
- *Machines and other equipment are powered by electricity*
- *Both vehicles were able to roll off the assembly line about every 90 seconds.*
- *Steel is still a major component*

List three ways that it was different?

- *More sophisticated equipment is used today such as robots and computers*
- *More tasks are done by electrically powered equipment.*
- *There are more parts in today's vehicles.*
- *Today's autos have more options such as different paint colors*
- *Modern factories have more safety requirements such as wearing helmets and shields on machinery.*
- *More plastics are used today*
